

Millions of Songbirds like Peabody Here Die in Window Collisions Each Year!

Please Help Stop These Deaths by Making Our Campus and Your Home “BirdSafe_{sm}”

It's Easy!

- **Close draperies** to eliminate “tunnels” where windows align to let birds can see all the way through your home, office or classroom.
- **Reduce reflections** on windows or “break up” large areas of glass by applying products like CollidEscape, WindowAlerts, BirdScreens, or Whispering Windows. Or, hang wind chimes, mobiles, old CDs, etc. in front of large windows.
- Move large **indoor plants away from windows** (birds think they can land in them).
- **Peak migration months** for birds in our area are May and September-October.
